

# What is **reliability** worth?

It's the value of simplifying complex completions with a step change in performance.

*Cable is inserted into formed slot in elastomer which heals upon swelling.*

## **Industry Challenge**

Improving well construction economics in multilateral SmartWell® completions.

## **Halliburton Solution**

Halliburton's Swellpacker® cable system to enable the passage of single or multiple control lines or flat packs through the packer without the need to cut and splice the cables.

## **Operator Benefits**

- Openhole SmartWell completion with increased reliability by avoiding cable splicing
- Simplifies well construction and helps reduce cost
- Helps increase efficiency with line installation of approximately 10 minutes per flat pack or control line, a significant improvement over conventional methods
- One trip solution with no mechanical packer setting requirements
