

Halliburton Consulting & Project Management

Fact Sheet

Global overview

Value proposition:

We collaborate to deliver solutions that manage risk, maximize customer asset value and enhance returns for Halliburton.

About Consulting & Project Management:

- Consists of 3 sub-Product Service Lines that spearhead our integrated-services strategy
- Leverages the full line of Halliburton's oilfield services, products, and technologies to solve customer challenges throughout the oilfield lifecycle using an integrated approach
- Each of the 3 sub-Product Service Lines uses its discipline as an opportunity to leverage all Halliburton resources and technology to help customers assess, plan, build, and manage the entire lifecycle of oil and gas assets.

Three Sub Product Service Lines:

- **Consulting** - Global multidisciplinary consultancy of geoscientists, engineers and trusted advisors, managing hundreds of projects each year. This group works collaboratively with our customers to address their critical questions around Mature Fields, Unconventionals, Deepwater and other Well Engineering issues, and Performance and Capability Improvement.
- **Integrated Asset Management** - Develops customer relationships-based on long-term contractual models that fully align the customer and Halliburton interests. It provides complete management of existing oil and gas assets, from day-to-day production operations through field redevelopment planning, and workover and new drills delivery to enhance recovery.

- **Project Management** - Delivers top-tier well construction and well intervention projects, collaborating with its customers and through an integrated service strategy that brings together the entire Halliburton organization to develop solutions specifically designed to fit the customers' unique needs. Integrated within and supporting the Project Management team is **Boots & Coots**, which helps customers reduce the likelihood of accidents, identify risks, reduce the threat of serious problems, and mitigate-damages. Specialists also immediately respond to and address the industry's most challenging well control problems including land, offshore, and subsea.

Global Presence

- Over 75 operational projects located in all regions of the world
- Operational on over 100 rig and rigless sites
- Projects vary from narrow scope consulting to long-term multi-year asset investment
- Operational projects include well intervention and well construction both onshore and offshore and range from integrated coordination to full project management
