

Production Solutions

Fact Sheet

Global overview

Value proposition:

Increase well performance through customized intervention solutions and reliable execution.

About Production Solutions:

The Production Solutions team collaborates with customers to help increase their wells' performance. We provide a full range of downhole solutions and intervention services to our customers with our coiled tubing, hydraulic workover and nitrogen pumping equipment.

Key points:

- One of our many differentiators is our 3D workflow: **D**iagnose, **D**esign and **D**eliver
 - Our ability to **D**iagnose well challenges with our talented employees using innovative technology
 - We **D**esign unique solutions to **h**elp efficiently improve well performance
 - We **D**eliver best in class reliable services
- To execute on our commitments we focus on personnel development, enhanced workflows and control points and technology development

Global presence:

- Production Solutions is present on all continents and operates in over 40 countries
- We are the world's #1 hydraulic workover service company
- We are the world's #2 coiled tubing provider

A few key technologies:

- **SPECTRUM FUSIONSM** is the new generation of real-time coiled tubing services. The system is a step change in the industry by integrating fiber optic and electric communication and power. The system is fully compatible with wireline and mechanical tools, offering unlimited flexibility in diagnostic, design and delivery of the operations.
- **Enhanced QuikRig[®]** (EQR) next-generation coiled tubing system is designed with the well control package preassembled on a mast, improving operational efficiency, reducing rig-up time, and creating a safer rig site environment.
- **Pulsonix[®] TFA** uses a third generation fluidic oscillator which creates bursts of pulsating pressure waves within the wellbore and formation fluid, enabling pinpoint, real-time placement of fluids
- **CobraMax[®] DM** service is a pinpoint coiled tubing fracturing treatment using a unique downhole mixing system to maximize reservoir production
- **CoilSweep[®]** service is a coiled tubing technology for cleaning sand and debris from any size hole, even large diameter and deviated wellbores.
- **Hydra-Blast[®] Pro** service is a total service package that removes scales, cakes, gunks, paraffins, and sludges that can kill production or injection rates
