With Tuned Cementing Solutions™ systems, Halliburton has created a set of innovative fit-for-purpose solutions with the flexibility required to allow each system to be tuned specifically for a given set of wellbore conditions. CBMCem cements form one of these families of fit-for-purpose solutions.

With CBMCem cement you receive a conventional cementing solution designed to solve a number of coalbed methane issues using specially tuned systems. CBMCem cements are designed to set up quickly in the lower temperatures typically associated with CBM wells, combat lost circulation issues, address gas migration problems, and/or achieve design top of cement.

Tuned Cementing Solutions tuned to your well’s specific needs.
