With Tuned Cementing Solutions™ cementing systems, Halliburton has created a set of innovative fit-for-purpose solutions with the flexibility required to allow each system to be tuned specifically for a given set of wellbore conditions. FracCem cements form one of these families of fit-for-purpose solutions.

With FracCem cement you receive a conventional cementing solution designed to help seal off fractures assisting in the cements capability to circulate up the annulus using specially tuned systems. FracCem cement will often contain additional particulate material not found in conventional cements.
