ShaleCem™ Cement

Designed to effectively circulate with minimal damage past shale intervals that might have sloughing or swelling problems

With Tuned Cementing Solutions™ cementing systems, Halliburton has created a set of innovative fit-for-purpose solutions with the flexibility required to allow each system to be tuned specifically for a given set of wellbore conditions. ShaleCem cements form one of these families of fit-for-purpose solutions.

With ShaleSeal cement you receive a conventional cementing solution designed to effectively circulate, with minimal damage, past shale intervals that might have sloughing or swelling problems if conventional unprotected cement was used.
