With Tuned Cementing Solutions™ cementing systems, Halliburton has created a set of innovative fit-for-purpose solutions with the flexibility required to allow each system to be tuned specifically for a given set of wellbore conditions. VersaCem cements form one of these families of fit-for-purpose solutions.

With VersaCem cement you receive a conventional cementing solution designed to be mixed at a wide range of densities and water requirements. Even at this wide range of densities VersaCem cements can have low (to no) freewater, good compressive strength development at the lower densities, and no viscosity or thickening time problems at the upper density ranges.
