With Tuned Cementing Solutions™ cementing systems, Halliburton has created a set of innovative fit-for-purpose solutions with the flexibility required to allow each system to be tuned specifically for a given set of wellbore conditions. HalSeal cements form one of these families of fit-for-purpose solutions.

With HalSeal cement you receive a foamed cementing solution designed as a generic solution to be used when no specific problems are expected and standard Halliburton high quality results are required. HalSeal cements can provide the additional benefits of increased compressibility, bridging, and elasticity gained through the introduction of stable, well-dispersed small N₂ bubbles.
