With Tuned Cementing Solutions™ cementing systems, Halliburton has created a set of innovative fit-for-purpose solutions with the flexibility required to allow each system to be tuned specifically for a given set of wellbore conditions. ReverSeal cements form one of these families of fit-for-purpose solutions.

With ReverSeal cement you receive a foamed cementing solution designed to effectively circulate down the annulus forming an annular seal even when pumped backwards. ReverSeal cement can provide the additional benefits of increased compressibility, and elasticity gained through the introduction of stable, well-dispersed small N₂ bubbles.
