ShaleSeal™ Cement

Designed to effectively circulate with minimal damage past shale intervals with sloughing or swelling problems

With Tuned Cementing Solutions™ systems, Halliburton has created a set of innovative fit-for-purpose solutions with the flexibility required to allow each system to be tuned specifically for a given set of wellbore conditions. ShaleSeal cements form one of these families of fit-for-purpose solutions.

With ShaleSeal cement you receive a foamed cementing solution designed to effectively circulate, with minimal damage, past shale intervals that might have sloughing or swelling problems if conventional unprotected cement was used. ShaleSeal cement can provide the additional benefits of increased compressibility, and elasticity gained through the introduction of stable, well-dispersed small $\text{N}_2$ bubbles.
