SteamSeal™ Cements
Designed to form an effective annular seal

With Tuned Cementing Solutions™ cementing systems, Halliburton has created a set of innovative fit-for-purpose solutions with the flexibility required to allow each system to be tuned specifically for a given set of wellbore conditions. SteamSeal cements form one of these families of fit-for-purpose solutions.

With SteamSeal cement you receive a foamed cementing solution designed to form an effective annular seal in wells that will be exposed to high temperatures and the potentially corrosive environments caused by the injection of high temperature steam into the wellbore. SteamSeal cements can provide the additional benefits of increased compressibility, bridging, and elasticity gained through the introduction of stable, well-dispersed small N₂ bubbles.
