With Tuned Cementing Solutions™ cementing systems, Halliburton has created a set of innovative fit-for-purpose solutions with the flexibility required to allow each system to be tuned specifically for a given set of wellbore conditions. ThermaSeal cements form one of these families of fit-for-purpose solutions.

With ThermaSeal cement you receive a foamed cementing solution designed to function effectively in high temperature wellbores. Basic Portland cement is not stable at high temperatures. ThermaSeal cements can provide the additional benefits of increased compressibility, bridging, and elasticity gained through the introduction of stable, well-dispersed small N₂ bubbles.
