

Halliburton Opens Facility in Southern Bexar County

New Operations Center Will Support Six of the Company's Business Lines

SAN ANTONIO, TEXAS – Sept. 18, 2013 – Halliburton (NYSE: HAL) announced today the official opening of its new San Antonio Operations Center to serve the growing needs of the South Texas Eagle Ford shale and surrounding markets.

“Our new facility enables us to provide a wide range of services and support to our customers along the Eagle Ford corridor, as well as other South Texas fields,” said Paul Sheppard, Vice President of Halliburton’s Southeast Area. “Whether it’s opening or expanding a facility or creating innovative solutions and technologies, we do what it takes to help our customers effectively and efficiently develop their energy resources.

“The San Antonio area also provides us with a vibrant economy, a diverse workforce, exceptional schools of higher learning, and a solid local infrastructure,” Sheppard said.

The 150-acre, 400,000-square-foot facility is strategically located in southern Bexar County within the Eagle Ford operations area. The facility currently supports five of the company’s product service lines, including Production Enhancement, Boots & Coots, Cementing, Baroid, and Wireline and Perforating. The Completion Tools business line will move to the facility in 2014.

The center comprises a 10,000-square-foot state-of-the-art laboratory and real-time operations center, a 112,000-square-foot truck maintenance shop, a wireline and perforating facility, a mud plant and a double-sided cement bulk plant.

Halliburton broke ground on its San Antonio Operations Center in November 2011 and began recruiting heavily in the area for a diverse workforce, including college graduates, technical school graduates and former military personnel, among others.

To date, the company has hired more than 550 employees from the San Antonio area, and has transferred a number of managers, engineers and other employees from its other South Texas and East Texas operations. The center will support about 1,000 employees by the end of 2013.

With major facilities in San Antonio, Alice and Victoria, Texas, Halliburton is positioned to better serve customers that are operating across the 400-mile-long Eagle Ford shale, located in 24 counties.

The company has operated in South Texas for more than 80 years.

About Halliburton

Founded in 1919, Halliburton is one of the world's largest providers of products and services to the energy industry. With more than 75,000 employees, representing 140 nationalities in approximately 80 countries, the company serves the upstream oil and gas industry throughout the lifecycle of the reservoir – from locating hydrocarbons and managing geological data, to drilling and formation evaluation, well construction and completion, and optimizing production through the life of the field.
