ZoneGuard® Openhole Isolation Packers

Maximize Openhole Isolation Efficiently and Reliably
Zonal Isolation. Selective Stimulation. Fracturing Applications.

Halliburton
Completion Tools
Halliburton’s family of ZoneGuard® openhole isolation packers deliver unsurpassed sealing performance in a wide range of openhole conditions and can be used for zonal isolation in formation control, selective stimulation and fracturing applications. ZoneGuard openhole packers have been specifically designed to meet the requirements in unconventional, offshore deepwater applications as well as mature oil field locations.

**26** ZoneGuard® SR packers successfully run and set in one trip

**Reliable Isolation during Frac Job**
- Differential pressure rating up to 10,000 psi
- Well temperature 162°F
- 6.125 in. nominal hole size
- 22,850 measured depth to lowermost ZoneGuard SR isolation packer

**Did you know?**
- 1200+ systems successfully run
- Run in 7 different countries
- Set at depths in excess of 25,000 ft (MD)

**Zonal Isolation with PROVEN Reliability**
- Small running OD
- Instant set and seal capabilities
- High expansion sealing
- High differential pressure ratings
- Anti-preset mechanism
- Adjustable "start to set" shear values
