Unlock the Economic Potential of Your Mature Fields through Extended Production and Improved Recovery

With decades of experience and thousands of operations in every kind of well, Halliburton experts have the knowledge to gather and analyze critical information from vertical and horizontal wells to give you the edge in revitalizing your mature fields. We work with you to identify and deliver the right combination of cost-effective solutions that can help you extend the life of your well or field beyond the decline curve.

Whether you’re interested in accessing additional production in the well, increasing production through refracturing or water cutoff in existing wells, or plug and abandonment solutions, Halliburton has what it takes to address your needs.

WELL PRODUCTION OPTIMIZATION
Well-centric, intervention solutions designed to help you maintain production or increase well performance, and achieve target production at lower costs per Barrel of Oil Equivalent (BOE).

IMPROVED ASSET RECOVERY
Field-centric reservoir solutions designed to help you increase reservoir contact, access bypassed pay, and improve estimated ultimate recovery (EUR) for maximized asset value.

WELL ABANDONMENT
Integrated P&A solutions designed to help you provide barrier assurance and well integrity at lower costs, while adhering to environmental regulations and safety requirements.

Every step of the way, let’s work together to achieve the full economic potential of your assets.

Halliburton brings technology, global experience, and know-how to produce more oil and gas faster with demonstrable cost efficiencies.
