Conformance

Activator IT™ Activator

**Activator IT™ activator is used in INJECTROL® IT service,** an internally catalyzed silicate system that achieves depth-of-matrix penetration for helping control water flow during drilling, completion, production, and injection operations.

**Applications**

Activator IT activator is effective at bottomhole injection temperatures (BHITs) from 125° to 180°F (83°C). Typical activator concentrations are 150 to 1,000 lb/Mgal of treatment solution.

**Benefits**

When used in INJECTROL IT service, Activator IT activator can provide the following benefits:

- It has widely variable set times.
- It effectively plugs rock matrices.
- It is a nonhazardous waste according to the Environmental Protection Agency (EPA).
