Camera Inspection Services
Provides an Accurate Picture of Conditions Inside Plant Production Systems

Camera inspection has been proved to save time, resources and cost in helping to determine the actual status of process systems.

**Camera Inspection Service Applications**

Camera inspection services can be used in a wide variety of cost-effective applications including the following:

- Inspect the cleanliness of new pipe work.
- Check existing pipework for any buildup of sand, wax or scales on the internal surface.
- Check the integrity of vessel linings.
- Inspect baffle plates.
- Inspect for general corrosion.
- Verify the results of specialized cleaning operations.
- Evaluate the effectiveness of cleaning and flushing operations.

**Capabilities and Benefits**

Halliburton's camera inspection services offer important benefits and features:

- Easy to use and deploy.
- Requires minimal disruption of production.
- Capable of recording findings for clients' records.
- Camera entry sizes can range from 8 mm to 142 cm (.3 in. to 56 in.).
- Camera models capable of 360° viewing.
- Camera models capable of reaching up to 656 ft (200 meters).
- Additional light sources are available.

**Global Experience**

Halliburton provides camera inspection services to construction projects as well as operational facilities from our operational bases in 73 countries which cover almost every oil and gas producing area of the world. Our track record covers the complete range of pipework, system types and diameters.
Committed to HSE and Quality Excellence

Halliburton’s camera inspection services can enhance both the quality and safety of any project undertaken through system ownership, reduction in interfaces and cross-discipline communications. In addition, Halliburton personnel receive top quality in-house training and competency systems.

Halliburton’s camera service uses a wide range of the latest cameras, tractors and boroscopes to enable access to the most difficult work locations.
