WellCall® Mobile Application

Smart phone application (app) enables easy access to Boots & Coots emergency dispatch and a site specific Well Control Contingency Plan

**Boots & Coots WellCall® app effectively turns your mobile device into an on-the-go reference guide for well control responses.**

The WellCall app enables easy access to our Well Control team in case of an emergency. This feature is immediately available when the app is downloaded on a smart phone mobile device. By tapping the onscreen “Emergency” button and then the “Call” button, the user is instantly connected to our emergency dispatch, facilitating a faster response when timing is critical.

A key component of this app is the secure access to a customer’s site-specific Well Control Contingency Plan (WCCP). The authorized user enters a secure username and password and then taps the log-in button, which brings up the main screen. Next, the user taps the “Contingency Plans” link to display all the available Well Control procedure documents, which are provided in a secured PDF format. From there, the user can scroll to the rapid response guide to find the immediate steps needed and precise instructions on their execution. To help ensure security, the app allows access to only the contingency plans tied directly to the specific user ID. The WellCall app will augment your company’s emergency-response operations and provide critical guidance during an event.

Now, access to your company’s WCCP is available at your fingertips.

The app also enables the user to complete a basic blowout report – including the well name, company name, the name and phone number of the designated on-site contact person, and the physical well location and/or GPS coordinates. The blowout report also may include: special instructions regarding the operation being undertaken at the time of a kick; downhole and surface pressure readings; well depth; the type and density of the active fluid; the well type (gas or oil); well control equipment testing records; proximity to populated areas; and the potential for toxic gas emissions that could endanger people on location or in the area.
Benefits

The WCCP is configurable to meet your specific needs and can include, but is not limited to, the following:

- Emergency management organization and job responsibilities
- Mobilization priorities
- Initial procedures and instructions
- Prequalification of critical equipment, personnel, contractors, and suppliers
- Data-acquisition needs for site survey and files
- Safety
- Emergency classifications
- General intervention strategies

- Blowout scenarios
- Specific intervention strategy: Identify relief well and surface needs for hypothetical blowouts on critical structures and exploration wells
- Logistics and support: Details of how to source equipment, material, and services requirements based on scenarios and local capabilities
- Equipment, material, and services requirements based on scenarios and local capabilities

Compatible with iPhone 4S and above, iPad 2 and above, iPad Mini, and Android-compatible devices. The WellCall app is free from iTunes and the Google Store and requires email activation.
